

Cop-R-Quik®

► PROTECTION

Better nutrition, healthier plants & less disease

Much less metallic copper is applied than with conventional copper fungicides – with no environmental impact on our soils, and no injury to the crop, Cop-R-Quik® is a systemic product that doesn't rely on perfect coverage and the formation of a protective film. This makes it less affected by wind and driving rains.

Cop-R-Quik® is a great tank mix partner.

It's **CHEAPER** than other treatments currently used by growers.

The most effective foliar compounds are...

- Soluble
- Hygroscopic
- Low Point of Deliquescence
- Amino Acid Complex

“Cop-R-Quik® was very effective on my Tasti-Lee™ Tomatoes. The copper uptake was very efficient and I believe contributed to my best, cleanest crop of tomatoes I have grown.”

-Steve Walker
Oakhill Tomatoes, Monticello FL

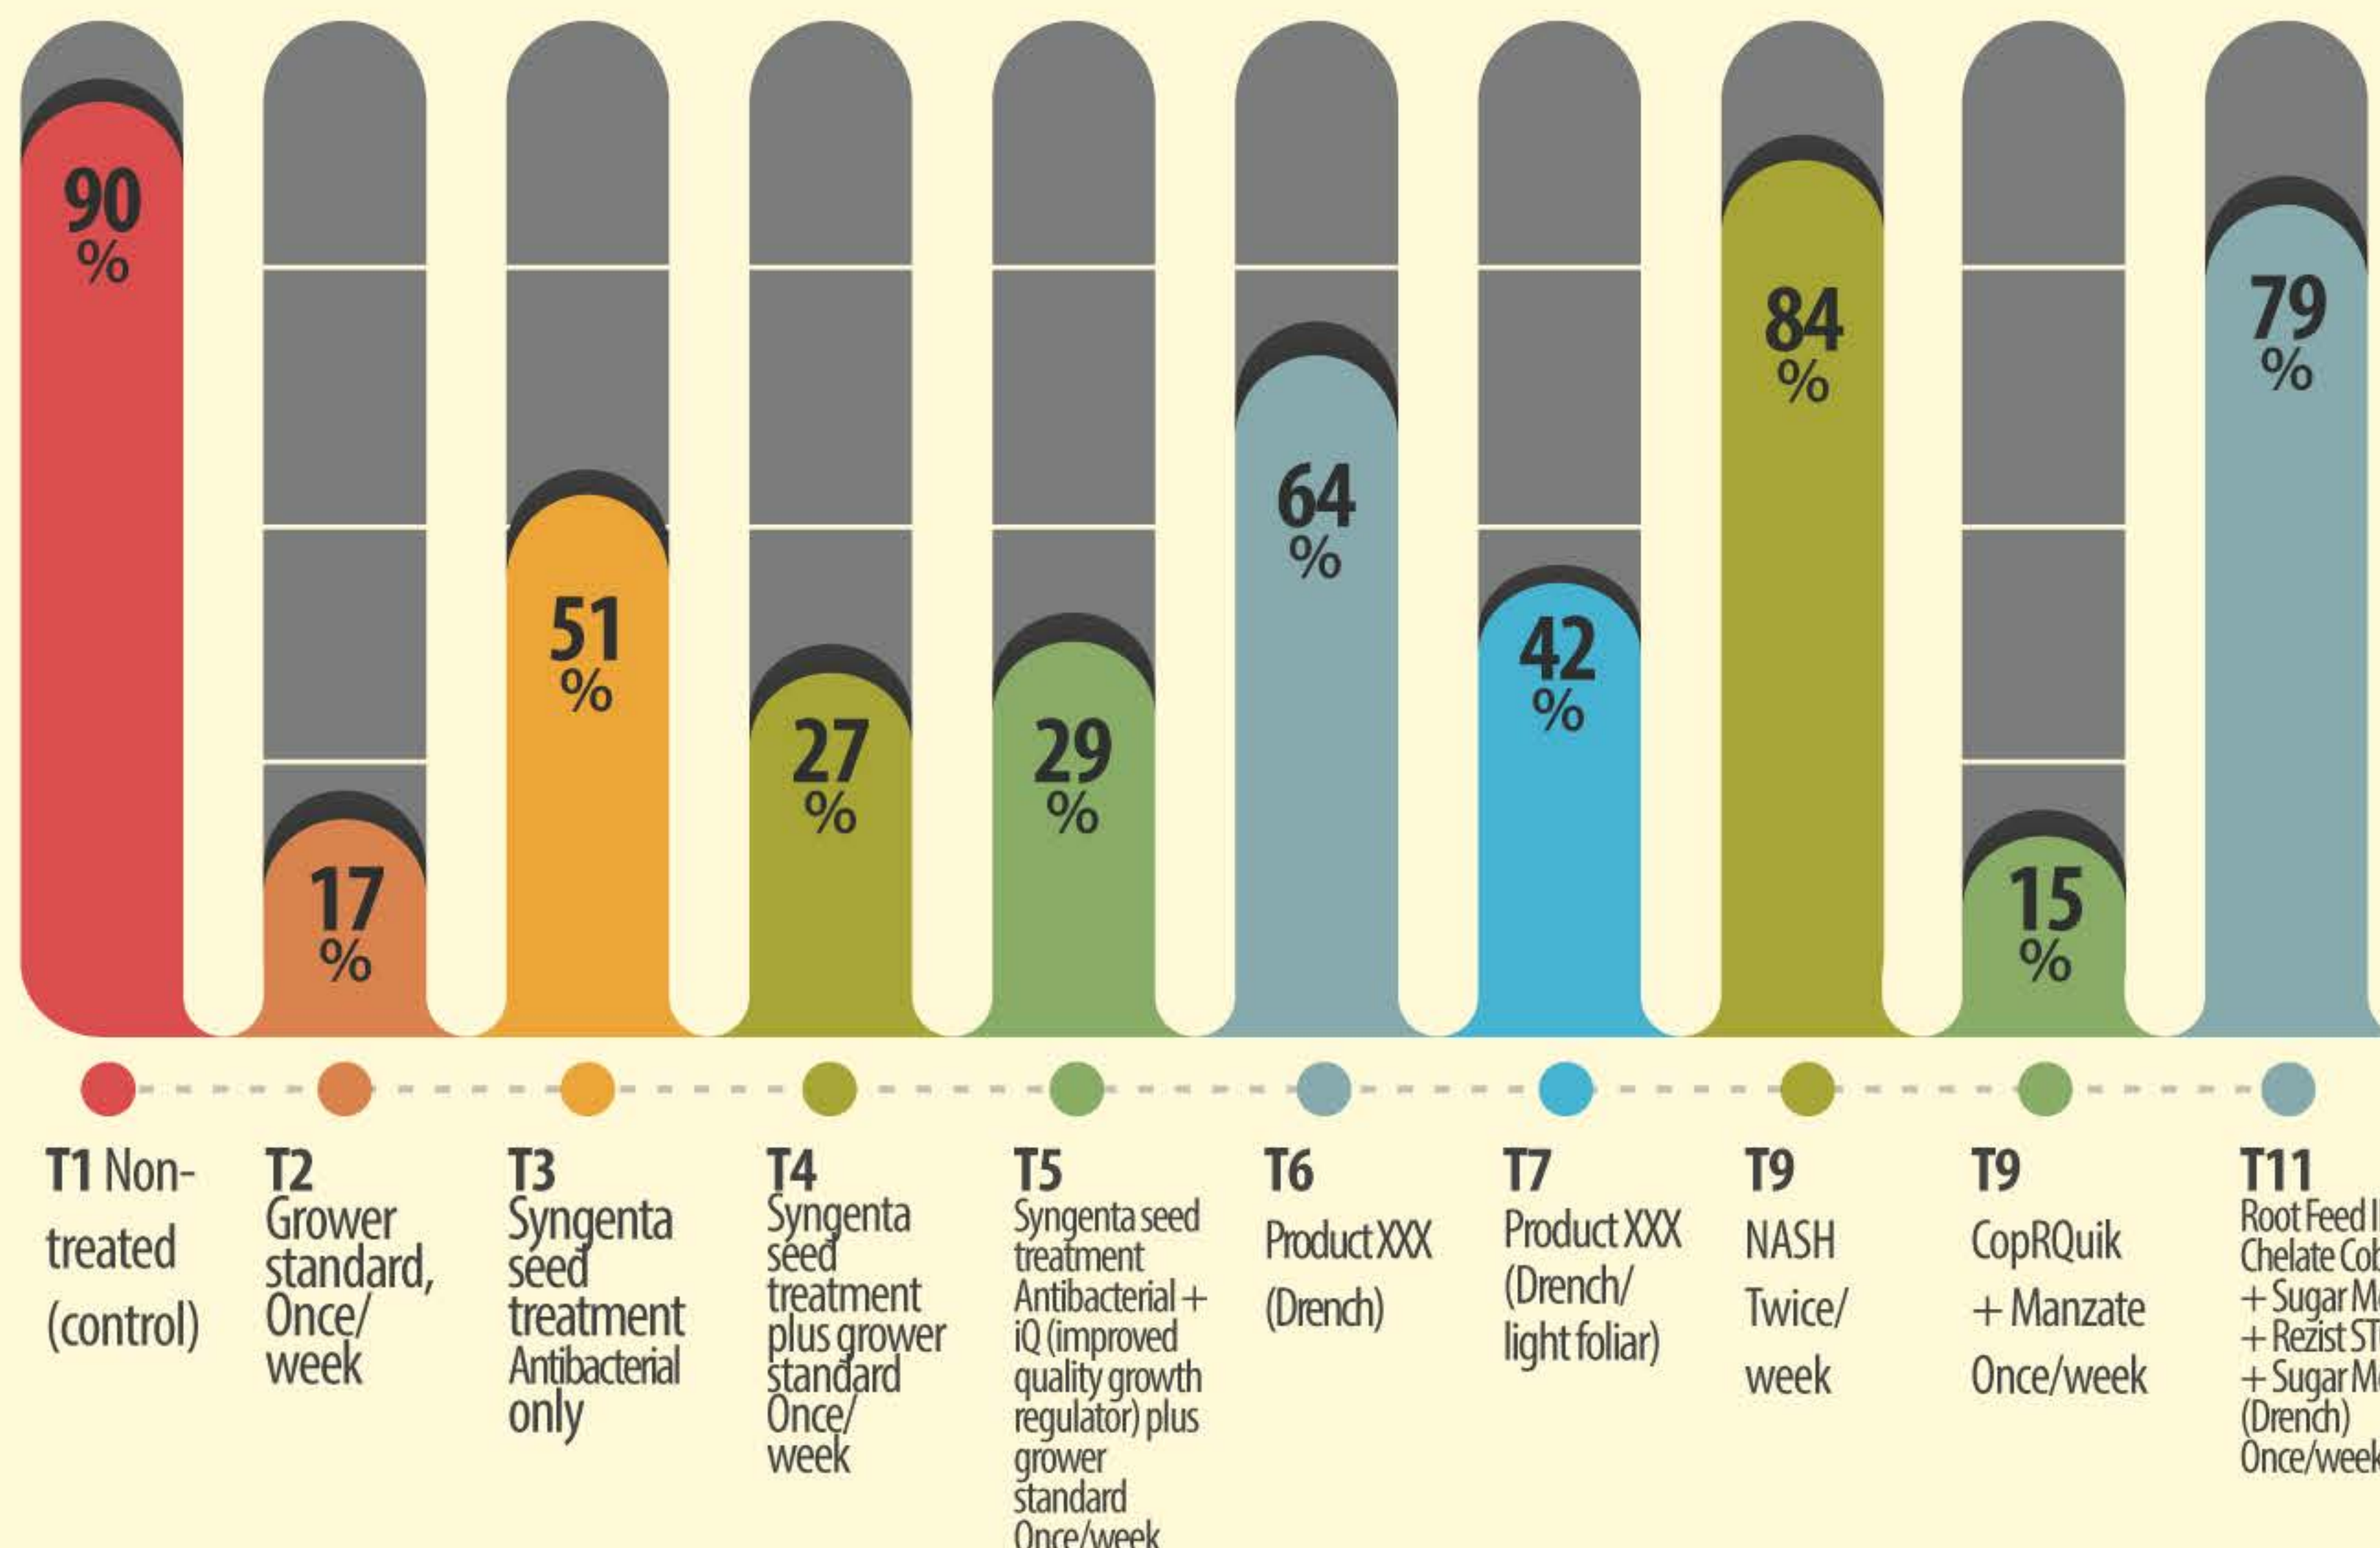

A natural alternative to traditional fungicides, Cop-R-Quik® comes with no preharvest intervals, and no damage to copper sensitive crops - just healthy, productive plants. Interactions of Copper with Plant Disease In the book, Mineral Nutrition and Plant Disease, the authors document over sixty bacterial and fungal diseases which positively respond to higher plant copper levels. This response is gained, not through the use of copper fungicides, but with copper nutritionals designed to increase systemic copper levels inside the plant.

In greenhouse studies by Monica Ozores Hampton, University of Florida, Immokalee, Cop-R-Quik® demonstrated its potential in reducing the effects of bacterial spot on tomatoes. In Dr. Ozores Hampton's trials, the combination of Cop-R-Quik® and Manzate outperformed old grower standards in preventing disease.

► TESTED WINNER

In University of Florida research trials, the copper in Cop-R-Quik® has had consistent, positive effects on diseases in several different crops. Is Cop-R-Quik® a fungicide? No, Cop-R-Quik® is a copper nutritional designed for foliar use. However, Cop-R-Quik® is being used as a natural alternative to traditional fungicides, with no reentry restrictions or preharvest intervals.

- **Cop-R-Quik®** is NOT a fungicide.
- **Cop-R-Quik®** is NOT a topical copper product.
- **Cop-R-Quik®** IS a highly soluble, amino acid complexed copper nutritional.
- **Cop-R-Quik®** IS designed to supply systemic copper.
- **Cop-R-Quik®** IS a natural alternative to traditional copper fungicides.
